

CIRACET's Equipment Maintenance Management Program (EMMP) Policy

CIRACET Corp ("CIRACET") provides to hospitals a biomedical equipment management program which provides maintenance and repair of all devices included in the Biomedical Equipment Inventory together with all related support services. All repairs and/or preventive maintenance (PMs) are performed so as to restore and/or confirm continuous proper operation of each biomedical device.

The EMMP is based on strict procedural guidelines for managing the effective, safe and reliable operation of medical equipment. The EMMP not only provides maintenance and repair of all devices but provide support to the Safety Committee in areas such as the National Patient Safety Goals for biomedical equipment, equipment selection and acquisition, and more.

The EMMP maintains complete and continuous compliance with the JCAHO medical equipment management requirements. These requirements are designed to assess and control the clinical and physical risks of fixed and portable equipment used for the diagnosis, treatment, monitoring, and care of patients.
